THE OREGON TECHNOLOGY CENTER

Established 1999, the Oregon Technology Center works in partnership with individuals and organizations to bring together their needs with our core competencies and knowledge. The center focuses on the following areas of opportunity:

1. Expanding technology education beyond the limits of the three OIT locations. This encompasses off-site programs and degrees as well as distance learning.

2. Providing custom training, education, and consulting in the form the customer desires for companies and organizations.

3. Facilitating degree entry and degree completion for traditional student customers.

4. Developing seminars, workshops, and gathering opportunities to provide new constituencies with opportunities to expand their knowledge.

5. Working with local leaders and groups to provide seamless integration of the center's abilities and expertise in the areas of economic development and community enrichment.
